

Grafix Clear Craft Plastic – Mouldable 3D Flowers

Designed by: Tania Ahmed

Decorate your home, gift or create a unique hair clip with this quick DIY craft. Make your own moldable 3D flowers with Grafix Clear Craft Plastic Film.

Supplies:

Grafix Clear Craft Plastic Film
Die and Die-cutting Machine
Acrylic Paint
Gem
Brush
Adhesive or Hot Glue Gun
Scissors
Lighter or Candle
Tweezer

Directions:

1. Use the die and die-cutting machine or scissors to cut out several tiny, small, medium, large and extra-large flower shapes from the Grafix Clear Craft Plastic Film.
2. Next, bend the cutout flower petals towards the center to create the Craft Plastic Film.
3. Using the lighter or candle, lightly and quickly curl and mold the flower petal edges.
4. Once the film is cool, paint the reverse side of the flowers using acrylic paints. Let the paint dry and then add a second or third coat to get the desired coverage.
5. Add hot glue or another adhesive to the center of the extra-large flower shape and adhere the large flower shape on top.
6. Repeat the adhesive process for the medium, small and tiny flower shapes.
7. Use the hot glue or alternative adhesive to adhere the gem to the center.
8. Now, you can adhere to a pencil case, a candle stand, a barrette and more as a custom embellishment!
