

Grafix Opaque White Craft Plastic Textured Card

Designed by: Tania Ahmed

Create a one-of-a-kind textured card with alcohol ink on Grafix Opaque White Craft Plastic Film.

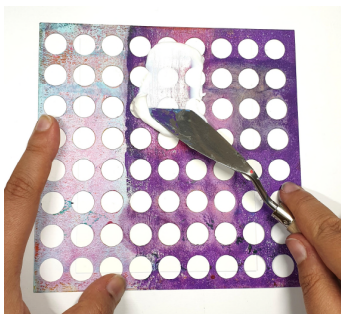

Supplies:

Grafix Opaque White Craft Plastic Film
Texture paste or gel medium
Stencil or Mask
Palette Knife
Heat Tool (optional)
Alcohol Ink
Die-cut sentiment or sticker
4.25" x 5.5" White card blank
Glue

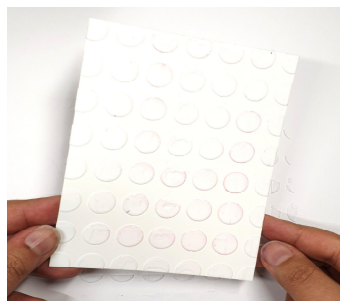

Directions:

1. Start by trimming Grafix Opaque White Craft Plastic Film into a 4" x 5.25" panel for the card background.
2. Next, select a stencil or mask and apply the texture paste or gel medium through the stencil with a palette knife.
3. Then, remove the stencil and allow the paste to dry completely. (You can use a heat tool to speed up the drying. It might cause the medium to bubble and create texture. This will depend on the medium brand used).
4. After the panel has dried completely, drip alcohol ink over the textured Opaque White Craft Plastic surface.
5. Use more colors if desired and tilt the Opaque White Craft Plastic to blend alcohol inks together.
6. Allow the alcohol ink to dry completely. (Use a heat tool if necessary).
7. Attach alcohol inked Opaque White Craft Plastic panel to the blank white card with glue.
8. Lastly, add a die-cut sentiment or sticker to the Opaque White Craft Plastic panel with glue.
