

Your Source For Creative Plastic Films

Helps you to create by bringing you new tools, techniques, and materials for your printing needs!

Stencil Film

Used to create hand-cut polyester masking stencils that can be taped to the printing screen. The film is transparent which allows for easy reference and tracing of images. Stencils can be used repeatedly.

Monoprint Plate

A transparent, durable, nonporous polyester printing surface used to create unique prints by applying paint, using stencils, tracing, or removing ink to create a print.

Imaging Print Film

Used as a masking stencil to create clear film positives for the screen-printing photo emulsion process. They are compatible with either inkjet or laser printers.

Making printing easier and better than ever, for your projects!

Inking Palette

A smooth, nonporous, disposable plastic sheet that is quick and easy to use. Sheets are gummed at two ends to prevent curling when rolling ink with a brayer. Tear the sheet from the pad when finished and discard
