Adhesive Dots

# Artist-tac

Dry transfer adhesive dots, initially repositionable but become permanent once burnished. Works by transferring a super fine layer of adhesive micro dots, ensuring full edge to edge adhesion, even on small, irregular shaped items.

Press intricate shaped papers onto the dots and turn it into a sticker.

Apply to a full sheet of paper or cardstock before cutting.

Use an incredible white mask eraser to remove extra dots.

- Fill artist-tac sheet with paper elements. Save the ones not used for the future.
- Use as a design element by burnishing the dots onto the surface and rub with metallic foil, flakes or embossing powder.
- Try using on a curved or odd shaped surface.
