tips & tricks

Low Tack Matte

Frisket Film

A .002" matte film with an ultra-removable adhesive on a polyester base. The adhesive sticks when needed and removes without leaving a residue.

Frisket film covers large areas and simple shapes.

Easy to cut with scissors, a knife or a die cutting machine.

Cut into strips, apply to craft plastic for swatching with alcohol inks.

- Try alternating between layers of paint and frisket to create different levels of opacity and depth.
- Works well to mask smooth surfaces like Craft Plastic, panels and illustration board.
- Use a light touch to cut with a knife while frisket is on your art surface.
